## Company overview

Alfa Radio Ltd. was incorporated February of 2001 at which time it purchased the assets of Alfa and Central Western Communication Ltd. a family run business for over 40 years. Alfa Radio Ltd. is owned by 19 shares holders who are amateur radio operators. The idea is to keep a company dealing in amateur radio equipment in Alberta.

Management is by three directors, one of which takes an active part in the day to day running of the company. All directors have an extensive background in radio communication engineering as well as other areas.

The company currently sells most lines of amateur radios and accessories. One of our major items is the "AlfaSpid" Rotator, this item is used to rotate directional HF/VHF antennas including antennas for Space Communications (ISS and EME). This item is sold world wide and we have installations in Antarctica, Russia and Australia to mention only a few places.

Alfa Radio Ltd. also deals in commercial radio, including "Land mobile", "Air Radio", and "Marine Radio".

We consult on the installation of all type of radio systems, VHF/UHF repeaters, HF voice and data, email via HF/VHF/UHF radio, to mention only some of the many aspects of radio communication.

Alfa Radio Ltd. operates from its current location in Edmonton, Alberta with a retail outlet as well as our warehouse and testing facility.

Alfa Radio Ltd. attends several trade shows thorough out the year including "Dayton" the Hamvention in Dayton, Ohio, the HAM fair in Fredrichshafen Germany, as well as several smaller conventions. We have given presentations at several of these major conventions.
